ABOUT ME

I am a web developer and tech enthusiast from Kathmandu, Nepal. I am currently pursuing his higher secondary education (+2) at the National School of Sciences in Lainchaur. I am passionate about web development and aims to leverage technology to create innovative solutions that address real-world problems, positively impacting his community and humanity at large. I thrive on challenges that push me beyond my comfort zone and am eager to explore opportunities, particularly internships, to further develop my skills and contribute meaningfully in the field of technology.

DIGITAL SKILLS

Microsoft Office package: Microsoft Word, Excel, PowerPoint, Access / HTML 5: HTML/CSS/JQuery / WEB DESIGNS / React (Intermediate) / Python Language - Basic knowledge / Basic Knowledge of PHP/MySQL

EDUCATION AND TRAINING

Secondary Education Examination (SEE) [GPA: 3.65]

Chuldevi Secondary School

City: Aarughat | Country: Nepal

Higher Level Education +2

National School of Sciences (NSS) [10/06/2023 – Current]

City: Kathmandu | Country: Nepal | Website: <https://nss.edu.np/>

PROJECTS

Library Management System

I recently built a **Library Management System** using **PHP, MySQL, and Tailwind CSS**.

Features:

- User Authentication – Separate login for students & admins
- Admin Dashboard – View and manage students, books, and issued books
- Book Management – Add, update, delete, and track books
- Student Section – Manage student details easily
- User Profile – Track issued books and available books

This project helped me enhance my full-stack development skills and gain hands-on experience in backend, database management, and UI design.

Amazon Clone

Created an **Amazon clone** using **HTML, CSS, and JavaScript**, focusing on building a responsive, user-friendly interface. I used CSS to design the layout and style the page, while JavaScript added interactivity, such as form validation and dynamic content. This project gave me a solid foundation in front-end development and enhanced my understanding of web design and basic scripting."

Digital Clock

I made a digital clock using **HTML, CSS, and JavaScript**. HTML creates the structure to display the time, CSS styles the clock to look good, and JavaScript updates the time every second. It was a simple and fun project to understand how these technologies work together!
